

Stock assessment of sockeye salmon from the Buskin River, Kodiak, Alaska, 2000

Abstract: A weir was operated on the Buskin River on Kodiak Island, Alaska, from May 24 – July 31, 2000 to enumerate sockeye salmon *Oncorhynchus nerka*. During this period a total of 11,180 sockeye salmon were counted. The midpoint of the run occurred on June 12. Most sockeye salmon in the escapement were ages 1.3 or 2.3. The reported subsistence harvest was 7,281 sockeye salmon, most of which were also ages 1.2 or 2.3.
